## FL MC EF 1300 MM ST

## FO converter with B-FOC (ST ${ }^{\oplus}$ ) connection ( 1300 nm ), for converting 10/100Base-T(X) to multi-mode fiberglass ( $50 / 125 \mu \mathrm{~m}$ )

## Data sheet <br> 104914_en_02

© PHOENIX CONTACT 2013-12-16

## 1 Description

The FL MC EF 1300 MM ST FO converter provides a high level of immunity to interference and a long transmission range in industrial applications by converting the 10/100Base-T(X) Ethernet interface to fiber optics ( 100 Mbps according to FX standard).
If longer distances are to be covered or if an existing fiberglass installation is used, the FO converter covers distances of up to $10,000 \mathrm{~m}$ with $62.5 / 125 \mu \mathrm{~m}$ or 6400 m with $50 / 125 \mu \mathrm{~m}$ multi-mode fiberglass in full duplex mode.

## Features

- 10/100Base-T(X) auto negotiation
- Auto MDI/MDIx switchover
- Operating mode and speed can be set manually
- Link fault pass through (LFP)
- Far End Fault signaling (FEF)
- B-FOC $\left(\mathrm{ST}^{\circledR}\right)$ connection
- Mounting on a 35 mm DIN rail
- Redundant power supply possible

WARNING: Explosion hazard when used in potentially explosive areas
The module is a category 3 item of electrical equipment. Follow the instructions provided here during installation and observe the safety instructions.

Make sure you always use the latest documentation.
It can be downloaded from the product at phoenixcontact.net/products.

## 3 Ordering data

## Description

FO converter with B-FOC $\left(\mathrm{ST}^{\circledR}\right)$ fiber optic connection (1300 nm), for converting 10/100Base-T(X) to multi-mode fiberglass ( $50 / 125 \mu \mathrm{~m}$ ). Auto nego tiation and auto $\mathrm{MDI}(\mathrm{X})$ function. Comprehensive link diagnostics. DIN-rail mountable, 18 ... 30 V DC supply.

## Accessories

RJ45 connector, shielded, with bend protection sleeve, 2 pieces, gray for straight cables, for assembly on site. For connections that are not crossed it is recommended that you use the connector set with gray bend protection sleeve.

RJ45 connector, shielded, with bend protection sleeve, 2 pieces, green for crossed cables, for assembly on site. For connections that are crossed, it is recommended that the connector set with green bend protection sleeves is used.

CAT5-SF/UTP cable (J-02YS(ST)C HP $2 \times 2 \times 24$ AWG), heavy-duty installation cable, $2 \times 2 \times 0.22 \mathrm{~mm}^{2}$, solid conductor, shielded,
outer sheath: 7.8 mm diameter, inner sheath: $5.75 \mathrm{~mm} \pm 0.15 \mathrm{~mm}$ diameter
CAT5-SF/UTP cable (J-LIO2YS(ST)C H $2 \times 2 \times 26$ AWG), light-duty, flexible installation cable $2 \times 2 \times 0.14 \mathrm{~mm}^{2}$, stranded, shielded, outer sheath: $5.75 \mathrm{~mm} \pm 0.15 \mathrm{~mm}$ diameter
Crimping pliers, for assembling the RJ45 plugs FL PLUG RJ45..., for assembly on site

DIN rail connector for DIN rail mounting. Universal for TBUS housing. Gold-plated contacts, 5-pos.
DIN rail power supply unit, primary-switched mode, narrow design, output: 24 V DC / 1.5 A

## Accessories

PROFINET HCS GI fiber cables, duplex 200/230 $\mu \mathrm{m}$, increased bandwidth for Ethernet applications in particular. Robust PUR outer sheath. Heavy version suitable for drag chains and indoor installation, sold by the meter without plugs

RJ45 connector, IP20, CAT5e, 8-pos., with QUICKON fast connection technology, for $26 \ldots 23$ AWG 1 -wire and 7 -wire conductors,
for 4.5 mm ... 8.0 mm cable diameter, labeling: TIA 568 B , color: gray
B-FOC (ST) connector set for standard PROFINET HCS fiber cables with 2.2 mm diameter of the individual elements. Consisting of 4 quick mounting connectors with bend protection for self-assembly.

## 4 Technical data

## Supply

| Power supply | $18 \mathrm{~V} \mathrm{DC} \ldots 30 \mathrm{VDC}$ (Screw connection) |
| :--- | :--- |
|  | $18 \mathrm{VDC} \ldots 30 \mathrm{VC}$ (as an alternative or redundant, via backplane bus contact <br> and system current supply) |
| Typical current consumption | $<100 \mathrm{~mA}(24 \mathrm{VDC})$ |
| Protective circuit | Protection against polarity reversal |
| Electrical isolation | $(\mathrm{VCC} / / \mathrm{FE} / /$ Ethernet $)$ |
| Test voltage data interface/power supply | $1.5 \mathrm{kV} \mathrm{Vms}_{\mathrm{rms}}(50 \mathrm{~Hz}, 1 \mathrm{~min})$. |

Ethernet interface, 10/100BASE-T(X) in acc. with IEEE 802.3u

| Connection method | RJ45 socket, shielded |
| :---: | :---: |
| Conductor cross section | $0.2 \mathrm{~mm}^{2} \ldots 2.5 \mathrm{~mm}^{2}$ ( 24 AWG ... 14 AWG ) |
| Transmission speed | 10/100 MBit/s |
| Transmission length | 100 m (twisted pair, shielded) |
| Transmission medium | Copper |
| Auto-negotiation modes | Auto |
| Link through | Link fault pass through |
| MDI-/MDI-X switchover | Auto-MDI(X) |
| FO interface |  |
| Data rate | 100 Mbps |
| Connection method | B-FOC (ST ${ }^{\circledR}$ ) |
| Wavelength | 1300 nm |
| Laser protection | Class 1 according to DIN EN 60825-1 |
| Transmission length incl. 3 dB system reserve | 6.4 km (with F-G 50/125 0,7 dB/km F 1000) 2.8 km (with F-G 50/125 1,6 dB/km F 800) 10 km (with F-G 62,5/125 0,7 dB/km F 1000) 3 km (with F-G 62.5/125 $2.6 \mathrm{~dB} / \mathrm{km}$ F 600) 2 km (with 2GK200/230 GI-HCS) |
| Transmit capacity, minimum | $\geq-23.5 \mathrm{dBm}((50 / 125 \mu \mathrm{~m})$ dynamic in link mode (average)) $\geq-20 \mathrm{dBm}((62,5 / 125 \mu \mathrm{~m})$ dynamic in link mode (average)) |
| Transmit capacity, maximum | $\leq-14 \mathrm{dBm}((50 / 125 \mu \mathrm{~m})$ dynamic in link mode (average)) $\leq-14 \mathrm{dBm}((62,5 / 125 \mu \mathrm{~m})$ dynamic in link mode (average)) |
| Minimum receiver sensitivity | -31 dBm (dynamic in link mode (average)) |
| Maximum receiver sensitivity | -14 dBm (dynamic in link mode (average)) |

### 4.1 UL Notes

(①). INDUSTRIAL CONTROL EQUIPMENT 11AE
Wire Range: 24-14 AWG
Torque: 5-7 (Lbs-Ins)
Environmental designation: "Open Type Device"
"Pollution Degree 2 Installation Environment"

PROCESS CONTROL EQUIPMENT FOR HAZARDOUS LOCATIONS 31ZN
A This equipment is suitable for use in Class I, Zone 2, AEx nA IIC T4; Ex nA IIC T4 Gc X or Class I, Division 2, Groups A, B, C, D or non-hazardous locations only.
B Provision shall be made to prevent transient disturbances of more than $140 \%$ of the rated supply voltage.
C The device must be installed in a Class I, Zone 2 certified overall enclosure rated IP54 with tool-accessible only cover or door and in pollution degree 2 environment only.
D Unit shall be supplied by Limited Energy circuit according to clause 9.4 of UL 61010-1 3rd edition of Limited Power Source according to clause 2.5 of UL 60950-1 or NEC Class 2.
E Conductor temperature rating must be $72^{\circ} \mathrm{C}$ or higher.
F Maximum relative humidity $80 \%$ for temperatures up to $31^{\circ} \mathrm{C}$ decreasing linearly to $50 \%$ relative humidity at $40^{\circ} \mathrm{C}$.

## 5 Safety regulations and installation notes

5.1 Installation and operation

## CAUTION:

Observe the following safety notes when using the FO converter.

- The category 3 device is suitable for installation in potentially explosive area zone 2 . It fulfills the requirements of EN 60079-0:2009 and EN 60079-15:2010.
- Suitable category 2 devices approved for the application may be connected to the fiber optic interface.
- Installation, operation, and maintenance may only be carried out by qualified electricians. Follow the installation instructions as described.
- When installing and operating the device, the applicable regulations and safety directives (including national safety directives), as well as general technical regulations, must be observed. The technical data is provided in the package slip and on the certificates (conformity assessment, additional approvals where applicable).
- The device must not be opened or modified apart from the configuration of the DIP switches. Do not repair the device yourself but replace it with an equivalent device. Repairs may only be carried out by the manufacturer. The manufacturer is not liable for damage resulting from a failure to comply.
- The IP20 protection (IEC 60529/EN 60529) of the device is intended for use in a clean and dry environment. The device must not be subject to mechanical strain and/or thermal loads, which exceed the limits described.
- The device is not designed for use in atmospheres with a danger of dust explosions.
- If dust is present, it is necessary to install into a suitable approved housing, whereby the surface temperature of the housing must be taken into consideration.
- The switches of the device that can be accessed may only be actuated when the power supply to the device is disconnected.
- Provisions shall be made to prevent the rated voltage from being exceeded by transient disturbances of more than 140\%.

### 5.2 Safety regulations for installation in potentially explosive areas

## WARNING: Explosion hazard when used in potentially explosive areas

Please make sure that the following notes and instructions are observed.

- Observe the specified conditions for use in potentially explosive areas.
- At the time of installation, use an approved housing (minimum protection IP54), which meets the requirements of EN 60079-15. Within this context, observe the requirements of IEC 60079-14/EN 60079-14.
- In zone 2, only connect devices to the supply and signal circuits that are suitable for operation in the Ex zone 2 and the conditions at the installation location.
- In potentially explosive areas, terminals may only be snapped onto or off the DIN rail connector and wires may only be connected or disconnected when the power is switched off.
- The device must be stopped and immediately removed from the Ex area if it is damaged, was subject to an impermissible load, stored incorrectly or if it malfunctions.
- For reliable operation, the RJ connection must be equipped with a fully functional locking clip. Repair any damaged plug plugs immediately.

### 6.4 Diagnostics and status indicators

## Ethernet interface (TP port)

6 Link/Activity/10/100

| Yellow | ON | 10 Mbps link |
| :--- | :--- | :--- |
|  | Flashing | 10 Mbps link - active data <br> transmission <br> Green |
|  | ON | 100 Mbps link |
| Glashing |  |  |
| Green | OFF | data transmission <br> dative |
|  | ON | Half duplex transmission |

## Fiber optics interface (FO port)

8 LINK Yellow ON Fiber optics link available, no data communication
Flashing Data transmission at FO port
9 FEF Red ON Far end fault has occurred. Remote station reports: "no light".

## Supply voltage

10 VCC Green ON Supply voltage OK

## Far End Fault signal (FEF)

If in the case of a FO converter the fiber optic connection for transmission fails, the FO converter on the opposite side sends the "No light" signal. This Far End Fault signal is received by the FO converter with the transmission fault via the receive cable and indicated with the red FEF LED.
If the copper connection is interrupted at one of the FO converters, data communication for both FO converters in both the optical and copper segment is disabled by the link fault pass through function. In this case, all Link LEDs go out. However, in order that error diagnostics can be carried out, the red FEF LED lights up on the FO converter where the copper segment is interrupted.

## 7 Configuration via DIP switches

NOTE: electrostatic discharge!
The device contains components that can be damaged or destroyed by electrostatic discharge. When handling the device, observe the necessary safety precautions against electrostatic discharge (ESD) according to EN 61340-5-1 and IEC 61340-5-1.

Only select the mode of operation when the power is disconnected! The change is activated after renewed power up.

Figure 4 Opening the housing

- Disengage the housing cover with a screwdriver (A).
- Then carefully pull the PCB out of the housing as far as possible (B).
By default, all DIP switches are in the "OFF" position. The copper side of the device operates in "Auto negotiation" mode.

Figure 5 DIP switches

| DIP | ON | OFF <br> (default setting) |
| :--- | :---: | :---: |
| $\mathbf{6}$ | LFP deactivated (local) | LFP activated (global) |
| $\mathbf{5}$ | Not used |  |
| $\mathbf{4}$ | Pass pause frame | Drop pause frame |
| $\mathbf{3}$ | Half duplex transmission | Full duplex transmission |
| $\mathbf{2}$ | 10 Mbps | 100 Mbps |
| $\mathbf{1}$ | Fixed transmission <br> speed on the copper side | Auto negotiation |

### 7.1 Setting data transmission (DIP 1, DIP 2, and DIP 3)

DIP 1 = OFF: the connected end devices negotiate 10/100 Mbps transmission speed and half/full transmission mode directly. The entire path behaves like a directly connected copper cable.
DIP 1 = ON: you set the transmission speed and mode manually with DIP switches 2 and 3 .

DIP 1 OFF Auto negotiation
DIP 1 ON DIP 2 OFF 100 Mbps
DIP 3 OFF Full duplex transmission
ON Half duplex transmission
i If DIP switch 1 is in the "OFF" position, the position of DIP switch 2 and 3 is not queried.

### 7.2 Pause frame (DIP 4)

A pause frame signal can request an Ethernet device to temporarily interrupt data transmission. This avoids overloading the partner when, for example, communication takes place with different transmission speeds.
DIP 4 = OFF: the device does not respond to an incoming pause frame signal. It is also not forwarded. A pause frame signal cannot be generated by the device itself.
The transmission of pause frame signals is negotiated in sections.
DIP 4 = ON: the device responds to pause frame signals or forwards them. A pause frame signal can be generated by the device itself.

### 7.3 Link fault pass through (DIP 6)

The LFP (link fault pass through) function provides permanent connection monitoring. The link on the fiber optic connection switches off if the connection is lost on the copper side of a FO converter. The FO converter on the other side registers the aborted link via the fiber optic path and likewise interrupts the connection for its twisted pair segment.
The entire connection over the optical path is therefore as transparent as it would be were communication purely cop-per-based. Both sides of the network connection can therefore detect a lost link immediately and respond accordingly. In the event of an error, this keeps the network load low and ensures that redundancy mechanisms can be activated.
DIP $6=$ OFF: the LFP function is activated. In the event of a fault, the entire connection is disabled (global).
DIP $6=$ ON: the LFP function is deactivated.
In the event of a fault, only the interrupted segment is disabled (local). This is useful during startup and in the event of an error.

## 8 Assembly

## CAUTION: Electric shock

The device is only intended for operation with SELV according to IEC 60950/EN 60950/ VDE 0805.

## NOTE: Malfunction

Connect the DIN rail to protective earth ground using a grounding terminal block. The devices are grounded when they are snapped onto the DIN rail (installation according to PELV).
This ensures that the shielding is effective. Connect protective earth ground with low impedance.

### 8.1 Mounting on a DIN rail

Figure 6 Mounting on a DIN rail

- To avoid contact resistance, only use clean, corrosionfree 35 mm DIN rails according to DIN EN 60715.
- Install an end clamp next to the left-hand module to prevent the modules from slipping.
- Place the module onto the DIN rail from above.
- Push the front of the device toward the mounting surface until it audibly snaps into place.
- The other modules to be contacted are snapped onto the DIN rail next to each other.

### 8.2 Combined assembly

Figure $7 \quad$ Combined assembly
The DIN rail connector is used to bridge the power supply and communication.

- Connect the DIN rail connectors (TBUS) (Order No. 2707437, 1 pc. per device) together for a connection station.
- Push the connected DIN rail connectors into the DIN rail.
- Place the module onto the DIN rail from above.
- Push the front of the device toward the mounting surface until it audibly snaps into place.
A connection station must not consist of more than ten devices.

In this case, it is vital to observe the mounting direction of the module and DIN rail connector:
snap-on foot at the bottom and connector on the left!

### 8.3 Removal

- Push down the locking tab with a screwdriver, needlenose pliers or similar.
- Pull the bottom edge of the module away from the mounting surface.
- Pull the module diagonally upwards away from the DIN rail.

## 9 Supply voltage

The device is operated using a 24 V DC SELV.

124 V DC supply voltage
20 V DC supply voltage
324 V DC supply voltage
40 V DC supply voltage
(Redundancy)
(Redundancy)
9.1 Operation as a single device

- Supply voltage to the device via terminal blocks 1 (24 V) and 2 ( 0 V ).
- Optional: connect an additional power supply unit to terminal blocks 3 and 4 to provide a redundant power supply.

### 9.2 Combined operation with a system power supply

- Connect a system power supply to two DIN rail connectors on the left of the group.
(MINI-SYS-PS-100-240AC/24DC/1.5, Order No. 2866983 or MINI-PS100-240AC/24DC/1.5/EX, Order No. 2866653 and two DIN rail connectors, Order No. 2709561)
- A second power supply unit can be used to create a redundant supply concept.

## 10 Twisted pair interface (TP port)

NOTE: Interference
Only use shielded twisted pair cables and corresponding shielded RJ45 connectors.

One Ethernet interface in RJ45 format is on the front of the device, which can only be connected to twisted pair cables with an impedance of $100 \Omega$.
The data transmission speed is $10 / 100 \mathrm{Mbps}$

Figure 8 Pin assignment

- Push the Ethernet cable with the crimped RJ45 plug into the TP interface until the plug engages with a click. Observe the plug coding.

## 11 Fiber optic interface (FO port)

WARNING: Risk of eye injury

| During operation, do not look directly into |
| :--- |
| transmitter diodes or use visual aids to look |
| into the glass fibers. The infrared light is not |
| visible. |

Avoid contamination.
Remove the dust protection caps just before the connectors are connected!

When using fiber optics, observe the fiber optic installation guidelines,
DB GB IBS SYS FOC ASSEMBLY, Order No. 9423439.

Figure $9 \quad$ Connect B-FOC $\left(\mathrm{ST}^{\circledR}\right)$ plug

- Remove the dust protection cap.
- Connect the fiber optic cable to the B-FOC $\left(\mathrm{ST}^{\circledR}\right)$ connector for the transmit and receive channel. Make sure the coding is in the correct position.
- Push theconnector spring mechanism downwards.
- Secure the connection with a quarter turn to the right (B).

## 12 Error localization

### 12.1 Normal operation

Figure 11 Diagnostics indicators in normal operation

### 12.2 Fault on the copper cable

The diagnostics indicator depends on DIP 6.
LFP activated, global (DIP $6=0$ OFF, default setting)

Figure 12 LAN fault with LFP activated, global
DIP 6 = OFF: by default, all Link LEDs go out in the event of a fault in a twisted pair segment.
The red FEF LED indicates the FO converter where the twisted pair segment failed.

## LFP deactivated, local (DIP $6=0 N$ )

Figure 13 LAN fault with LFP deactivated, local
DIP $6=$ ON: in the "LFP deactivated, local" setting, only the Link LEDs of the corresponding port go out in the event of a fault in a twisted pair segment. The Link LEDs at the copper port on the other media converter and for the fiber optic connection are on. The "LFP deactivated, local" setting therefore enables more precise diagnostics.

### 12.3 Fault on the fiber optic cable

The diagnostics indicator depends on DIP 6.

## LFP activated, global (DIP $6=0 F F$, default setting)

Figure 14 Fiber optic fault with LFP activated, global
If just one of the optical fibers is interrupted, you can determine which is the affected fiber via the FEF LEDs. If the FEF LED at a media converter lights up, the fiber connected to the transmit port (TD) is interrupted. The entire connection is disabled.

LFP deactivated, local (DIP $6=0 N$ )

Figure 15 Fiber optic fault with LFP deactivated, local
The red FEF LED lights up if the optical fiber at the transmit port of the device is interrupted. Only the affected segment is disabled, the copper port connections remain.
