## Output Voltage Adjustment

The ultra-wide output voltage trim range offers major advantages to users who select the SIL/SMT40C2 series. It is no longer necessary to purchase a variety of modules in order to cover different output voltages. The output voltage can be trimmed in a range of 0.59 - 5.1 V. When the SIL20C2 converter leaves the factory, the output has been adjusted to the default voltage of 0.59 V.

**Notes:**

1. Measured as per recommended system capacitance.
2. di/dt = 10 A/µs, Vin = Nom, Tc = 25 °C, load change = 0.75 Io to full Io and full Io to 0.75.
3. External input fusing is recommended.
4. Additional part numbers may be available with different output voltages.
5. Airflow dependent, 100 LFM minimum required.
6. No capacitors needed for ripple current stability.
7. No capacitors needed for stability.
8. NOTICE: Some models do not support all options. Please contact your local Artesyn Embedded Technologies representative or use the on-line model number search tool at http://www.Artesyn.com/power to find a suitable alternative.
